

AiZQuad IDE

FC_FLOW MESH · SOVEREIGN DEVELOPMENT PIPELINE

```
$ ./aizquad-ide --init --rooms 4 --mode sovereign
[BOOT] Room 1 — Command Post ..... ONLINE
[BOOT] Room 2 — File Status ..... ONLINE
[BOOT] Room 3 — Terminal ..... ONLINE
[BOOT] Room 4 — AI Chat (Sovereign) ..... ONLINE
[OK] 4-ROOM MESH ACTIVE // PIPELINE READY // NO TELEMETRY
```

Not a chat tool. Not just an editor. A full sovereign development command center.

I built this because I needed it.
I'm sharing it to flex — and to help.

THE PROBLEM	THE SOLUTION
VS Code sends telemetry	AiZQuad IDE runs 100% local
Cursor sends your code to OpenAI	AI access is session-based — you control what it sees
Nothing works properly on Termux	Built for Termux from day one — runs on your phone
Codebase grows into chaos	LOCK→SPLIT→SORT→INTEGRATE keeps everything clean
AI poisoning corrupts your work	Logic locks seal every version — tamper-proof
Vendor lock-in everywhere	Open core — GitHub, Termux, cloud, Sovereign Arch ready

FEATURE	AiZQuad IDE	VS Code	Cursor	Termux
4-room Bad MF Box layout	■	■	■	■
AI sees live — sovereign	■	■	■ cloud	■
File pipeline LOCK→BUILD	■	■	■	■
Runs on Termux / Android	■	■	■	■
No telemetry / No leaks	■	■	■	■
Divide & conquer mesh	■	■	■	■
Sovereign Arch ready	■	■	■	■

THE 4-ROOM COMMAND CENTER

Bad MF Box architecture — applied to sovereign development

AiZQuad IDE // FC_FLOW MESH // 4-ROOM COMMAND CENTER

[1] COMMAND POST

→ Pipeline control
→ Room management
→ Engine status
→ Lock / Unlock

[2] FILE STATUS

→ Current file
→ Last edits
→ Lock status
→ Diff view

[4] AI CHAT

→ AI sees your work
→ Edits with you
→ Live suggestions
→ Sovereign access

[3] TERMINAL

→ Live execution
→ Input → tools
→ File system
→ Build output

FORGE

SPLIT

FC

SORT

INTEGRATE

BUILD

THE PIPELINE – DIVIDE AND CONQUER

PHASE	COMMAND	WHAT IT DOES
LOCK	make lock ROOM=x VERSION=v1	Snapshot + hash + sign. Immutable record. Forever sealed.
SPLIT	make split ROOM=x	AST parsing breaks monolith into single-purpose modules.
SORT	make sort ROOM=x	Classifies into core / validation / config / utils / api / aut
INTEGRATE	make integrate ROOM=x	Merges best versions, generates public surface, wires to mesh.
VERIFY	make verify ROOM=x	Cryptographic check – logic lock confirms zero tampering.

WHERE THIS LIVES IN THE SOVEREIGN STACK

THE SOVEREIGN STACK — WHERE AiZQuad IDE LIVES

● Sovereign Arch

— OS layer — no telemetry — no backdoors

■ COMING

● Sovereign PEU

— Isolated compute — sovereign containers

■ COMING

● AiZQuad IDE + Lab

— Dev pipeline + 4-room command center

■ LIVE NOW

● FC_FLOW Mesh

— Reactive security — 6-node active defense

■ LIVE NOW

ROADMAP

- DONE 4-room interface + live pipeline + sovereign devcontainer + GitHub + Termux
- NEXT Room 5 – Evolution Room: AI suggests upgrades. System grows itself.
- NEXT TerminalBridge.ts – TypeScript integration + VS Code extension
- FUTURE Sovereign Arch integration – run inside sovereign OS for added protection

AiZQuad IDE

SOVEREIGN. ALWAYS.

I built this because I needed it.

The codebase was growing. The chaos was real.

I looked at the prints.

AI poisoning was real.

Telemetry was real.

The trust was gone.

So I built the lab I needed.

4 rooms. 5 phases. Sovereign.

Then I looked at the architecture.

It was the Bad MF Box.

The same 2x2 grid I built to defend.

Now it builds.

I'm sharing it to flex.

And to help.

Because that's what this is.

Star ■ the repo if you believe in sovereign development.

While others stay blind — Sovereign Enforcement holds the line.
